In the specification:

Page 3, last paragraph, beginning at line 28:

A further compound employed in another embodiment of the invention is, $3Me(II)O \cdot R_2O_3 \cdot Me(II)(anion)_2 \cdot nH_2O$ wherein Me(II) is one or more divalent cations, such as ~~CO_2~~ Ca for example, R_2 is Al_2, Fe_2 or Cr_2 anion is NO_2, NO_3, CO_3, BO_4 or OH and n is 0 to ~~18~~24, and preferably 10 to ~~18~~24. For some formulations, the anion may be divalent. In this case the formula would be $Me(II)O \cdot R_2O_3 \cdot Me(II)(anion)nH_2O$ wherein n is 0 to 18 and preferably 10 to 18.
